

NOVA-ONE® Liquid Whole Blood HbA1c Diabetes Control and Linearity

New easier to use Dropper Top NOD HbA1c Controls for Bayer A1cNOW PLUS+ and Siemens DCA 2000 “Vantage”!

- » NOD HbA1c Liquid Controls do not need Diluent or any Reconstitution
- » New Dropper Top Squeeze Vials eliminate the need for any Pipetting by techs
- » Longer 6 Month Refrigerated open vial refrigerated stability
- » Best Value choice for POL or POC Labs

All three new kit versions use plastic squeeze dropper top vials that allow customers to do away with reconstitution or having to pipette the control or linearity sample as a separate step. Refrigerated “open vial” stability has been increased to 6 months; and long term storage temperature to the expiration date is now specified at -15° C to -25° C which eliminate almost all long term storage issues for POL or POC customer sites.

Two control kit configuration choices:

- 6 month supply P/N **NOD13111-100** 2 vial kit
- 12 month supply P/N **NOD13122-100** 4 vial kit

P/N NOD13111-100 2 vial Control kit L1+ L2 X 1 ml with a \$98 list price: Liquid Refrigerated 6 month Open Vial Stability supply for Bayer A1cNOW PLUS+ and Siemens DCA 2000 “Vantage”. Also central Lab immunoassay & HPLC analyzers

P/N NOD13122-100 4 vial Control kit 2L1+ 2L2 X 1 ml with a \$179 list price: Liquid Refrigerated 6 month Open Vial Stability; and a 12month supply for Bayer A1cNOW PLUS+ and Siemens DCA 2000 “Vantage”. Also central Lab immunoassay & HPLC analyzers

Customer sites with no freezer capacity can order the two vial **NOD13111-100** which will give them half a year’s control coverage. Customers who do have freezers which can comply with this more common - 15° C temperature can order a year's worth with only one shipping charge, by ordering the four vial **NOD13122-100** and keeping two vials in the freezer while they use the other two vials stored in the refrigerator for the first six months. This new four (4) vial kit will give customers **33% more control material** than the prior HBA-G13133-050 six (6) vial kit.

Your Point of Care Quality Coordinators’ best friend! NOD Liquid Linearity allows easy documentation of satellites recovery cross reference values to their central Lab’s results.

P/N NOD HbL-G04041-100 4 vial Liquid Linearity L1+L2+L3+L4 X 1 ml with a \$295 List Price: Liquid Refrigerated 6 month Open Vial Stability; 12 month supply for Bayer A1cNOW PLUS+ and Siemens DCA 2000 “Vantage”. And also central Lab immunoassay & HPLC analyzers.

NOVA-ONE® A1C

Liquid Human Glycosylated Hemoglobin HbA1c Controls have also been tested for use with:

Tosoh® 2.2/G-7	Beckman Coulter Synchron CX® /LX
Bio-Rad Variant® I & II	Siemens DCA2000 “Vantage”®
Bayer A1cNOW Plus+® POC	PRIMUS PDQ® & ULTRA 2®
Roche Tinaquant® / Hitachi (all models)	Dade Dimension®
Roche Unimate® / Integra® (all models)	Pointe Scientific Reagents®

The variety of kit sizes allows users to order the most cost effective kit size to match their HbA1c testing volume.
